

The **Stirrup AFO** is a custom ankle foot orthosis designed to treat chronic conditions of the foot and ankle, especially for patients needing more ankle stability and hindfoot control.

Utilizing industry-leading technology, the Surestep Stirrup AFO can be fabricated in 5 business days via cast or scan. The sleek, low-profile footplate and uprights are contoured to the patient's foot and ankle; helping to stabilize rotational forces at the midtarsal, subtalar, and talocrural joints.

The Stirrup AFO can be fabricated with either a solid or articulated ankle.

Hinge Options
